

# CERTIFICACIONES

## Compilation requirements

- Install the Node JS tool for backend and frontend part of the application.
- Install the Angular cli tool.
- In the case of the Angular framework the compilation is done through ngc or also called Angular compiler so it is not necessary to take into account other requirements for the compilation of applications made in Angular.

## Operating environments

The application is hosted in cloud environments also known as PAAS. The backend part of the application is hosted in Render and the frontend part is hosted in Netlify.

## Dependencies

**For the frontend part you develop in Angular you need the following dependencies:**

- @angular/fire: "^6.1.5"
- @angular/material: "^12.2.13"
- @ngx-translate/core: "^13.0.0"
- @ngx-translate/http-loader: "^7.0.0"
- angular2-text-mask: "^9.0.0"
- chart.js: "^3.7.1"
- jsPDF: "^2.5.1"
- jsPDF-autotable: "^3.5.25"
- jszip: "^3.10.1",
- primeicons: "^6.0.1"
- primeng: "^12.2.3"
- sweetalert2: "^11.3.0"
- ngx-bootstrap: "^7.1.0"

**For the backend part you develop in NodeJS you need the following dependencies:**

- axios: "^1.4.0"
- bcrypt: "^5.0.1"
- body-parser: "^1.20.0"
- cors: "^2.8.5"
- dotenv: "^16.0.1"
- express: "^4.18.1"
- firebase-admin: "^11.10.1"
- form-data: "^4.0.0"
- formdata-node: "^5.0.1"
- i18n: "^0.15.0"

- joi: "^17.6.0"
- jsonwebtoken: "^8.5.1"
- micromatch: "^4.0.5"
- mongoose: "^6.3.6"
- nodemon: "^2.0.16"
